

# MEGA TURBO Mobile M Multi-Channel Mobile Radio-Monitoring Systems (700013)

The MEGA TURBO Mobile M Systems provide for remote premises or whole buildings protection against unauthorized data leakage through either listening or other radio-electronic devices.

These systems differ from each other by the performance.

The systems provide for the following:

- The automatic comparison of the signal in the monitored room with the one got from outdoor aerial
- The control of up to 25 channels in radio-band and wire lines and the systems enable to connect remote devices, such as converters, generators, acoustic systems etc.

All the information on the signals is stored in PC database.

The system is fully integrated into protection system and can be run via computer network.

MEGA TURBO Mobile M's distinctive feature is DSP and high operating rate. Up to 8 channels can be observed in at a time. It is housed in stress-worthy case. Besides, we can offer stationary variant with the components located in one box.

It is possible to configure the multi-channel system as required on the basis of RS digital M controller with 8-channel switch.

Optionally the System can be equipped with:

<b>RS DC</b>	Band expander with preselector (up to 12 GHz)	Up to 8 pieces
<b>RS/N</b>	Generator with D-220 aerial for neutralization of the pick-up sources in 89-1800 MHz (30-2000 MHz) band	Up to 8 pieces
<b>RS/K</b>	Microwave-switch	Up to 4 pieces
<b>RS/L plus</b>	Low frequency converter that provides signal analysis on the air, analysis of wire lines or visual range	Up to 1 piece
<b>RS/Z</b>	Controller of the remote two-channel acoustic system	Up to 25 items
	Amplifiers and Antenna-feeder devices
